DETAILED ACTION

Remarks

1. The Request for Reconsideration filed on January 21, 2005 has been received and entered. Claims 6-12, and 25-31 are pending.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 6-8, 10, 12, 25-27, 29, 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arlen, H. Gray (herein Arlen) *TeleZoo.com gives boost to Telecom/IT*, 10/5/1999 in view of Tenorio et al. (U.S. Patent No. 6,708,161 B2).

As to claim 6, Arlen discloses a method comprising:

- (a) hosting, on a server, a database of specification data of products of a plurality of different manufacturers (See <u>Arlen</u> page 4, paragraph 3), the product specification data in the database being arranged in predefined product (See <u>Arlen</u> page 3, paragraph 3);
- (c) providing an interface for use by product manufacturers for entry of new product specification data into the database and for modifying existing product specification data in the database, the interface requiring each manufacturer to use a same schema when entering or modifying product specification data in a particular product (See <u>Arlen</u> page 3, paragraph 5, wherein "interface" reads on "portal", also see <u>Arlen</u> page 3, paragraph 7);

Application/Control Number: 09/676,365

Art Unit: 2165

(d) in exchange for remuneration from a given manufacturer, providing that manufacturer with access to the interface and to its respective product specification data in the database for use outside of the database and charging each manufacturer desiring to have access to the database a fee for such access (See <u>Arlen</u> page 3, paragraphs 7-10, also see <u>Arlen</u> page 2, paragraph 7).

Arlen does not teach (b) defining, for each product class, a schema for the entry of specification data of products in that product class; predefined product classes.

Tenorio et al. teaches (b) defining, for each product class, a schema for the entry of specification data of products in that product class; predefined product classes (See <u>Tenorio et al.</u> column 8, lines 5-39, also see <u>Tenorio et al.</u> column 2, lines 29-41, and see <u>Tenorio et al.</u> column 7, lines 31-54, also see <u>Tenorio et al.</u> column 15, lines 8-39)

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified <u>Arlen</u> to include (b) defining, for each product class, a schema for the entry of specification data of products in that product class; predefined product classes.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified <u>Arlen</u> by the teaching of <u>Tenorio et al.</u> to include (b) defining, for each product class, a schema for the entry of specification data of products in that product class; predefined product classes because object oriented databases and product organization by classes are well known in the art to provide organization and efficient database storage.

Application/Control Number: 09/676,365

Art Unit: 2165

As to claims 7, and 26, <u>Arlen</u> as modified discloses wherein the fee is in the form of a monetary payment (See <u>Arlen</u> page 2, paragraph 6, wherein "monetary payment" reads on "revenue stream").

As to claims 8, and 27, <u>Arlen</u> as modified discloses wherein the fee comprises a one-time fee (See <u>Arlen</u> page 2, paragraph 7, wherein "one-time fee" reads on "fee paid by vendors").

As to claims 10, and 29, <u>Arlen</u> as modified discloses wherein the fee is based on usage of the database by the manufacturer (See <u>Arlen</u> page 2, paragraphs 7-8).

As to claims 12, and 31, <u>Arlen</u> as modified discloses wherein the fee for a given manufacturer is based on the number of times that the manufacturer accesses the database to retrieve product specification data (See <u>Arlen</u> page 2, paragraph 7, wherein "is based on the number of times" reads on "fee based on transaction").

As to claim 25, <u>Arlen</u> discloses a system for enabling an entity to serve as an application service provider with respect to product specification data of a plurality of manufacturers (See Arlen page 4, paragraph 3), the components comprising:

a database of specifications of products of the plurality of different manufacturers (See Arlen page 4, paragraph 3), the product specifications in the database being arranged in predefined product (See Arlen page 3, paragraph 3), and

an interface for use by the plurality of manufacturers for the entry of specifications of products in a given product (See <u>Arlen</u> page 3, paragraph 5, wherein "interface" reads on "portal", also see <u>Arlen</u> page 3, paragraph 7).

the interface further permitting each manufacturer that provides remuneration to the entity to access its respective product specification data in the database for use outside of the database and wherein the remuneration required for access to the database comprises a fee paid by each manufacturer (See <u>Arlen</u> page 3, paragraphs 7-10, also see <u>Arlen</u> page 2, paragraph 7).

Arlen does not teach there being defined, for each product class, a schema for the entry of specifications of products in that product class, the interface requiring each manufacturer to use the defined schema for a given product class when entering product specification data for products in that class.

Tenorio et al. teaches there being defined, for each product class, a schema for the entry of specifications of products in that product class, the interface requiring each manufacturer to use the defined schema for a given product class when entering product specification data for products in that class (See <u>Tenorio et al.</u> column 8, lines 5-39, also see <u>Tenorio et al.</u> column 2, lines 29-41, and see <u>Tenorio et al.</u> column 7, lines 31-54, also see <u>Tenorio et al.</u> column 15, lines 8-39)

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified Arlen to include there being defined, for each product class, a schema for the entry of specifications of products in that product class, the interface requiring each manufacturer to use the defined schema for a given product class when entering product specification data for products in that class.

Art Unit: 2165

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified Arlen by the teaching of Tenorio et al. to include there being defined, for each product class, a schema for the entry of specifications of products in that product class, the interface requiring each manufacturer to use the defined schema for a given product class when entering product specification data for products in that class because object oriented databases and product organization by classes are well known in the art to provide organization and efficient database storage.

6. Claims 9, 11, 28, and 30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Arlen, H. Gray (herein Arlen) *TeleZoo.com gives boost to Telecom/IT, 10/5/1999* in view of Tenorio et al. (U.S. Patent No. 6,708,161 B2) as applied to claims 6-8, 10, 12, 25-27, 29, 31 above, and further in view of Shear (U.S. Patent No. 5,410,598).

As to claims 9, and 28, <u>Arlen</u> as modified still does not teach wherein the fee comprises a periodically recurring fee.

Shear teaches wherein the fee comprises a periodically recurring fee (See Shear column 3, lines 18-45, also see Shear column 19, lines 20-38).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have further modified <u>Arlen</u> as modified to include wherein the fee comprises a periodically recurring fee.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have further modified <u>Arlen</u> as modified by the teaching of <u>Shear</u> to include

Application/Control Number: 09/676,365 Page 7

Art Unit: 2165

wherein the fee comprises a periodically recurring fee because it allows for business-to-business resell of resell products or equipment thereby maximizing utility and maximizing profit.

As to claims 11, and 30, <u>Arlen</u> as modified still does not disclose wherein the fee for a given manufacturer is based on the volume of product information stored in the database by that manufacturer.

Shear teaches wherein the fee for a given manufacturer is based on the volume of product information stored in the database by that manufacturer (See Shear column 6, lines 17-60, also see Shear column 19, lines 20-38, also see column 3, lines 18-45).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have further modified <u>Arlen</u> as modified to include wherein the fee for a given manufacturer is based on the volume of product information stored in the database by that manufacturer.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have further modified Arlen as modified by the teaching of Shear to include wherein the fee for a given manufacturer is based on the volume of product information stored in the database by that manufacturer because it allows for business-to-business resell of resell products or equipment thereby maximizing utility and maximizing profit.

Response to Arguments

7. Applicant's arguments with respect to claims 6-12, 25-31 have been considered but are most in view of the new ground(s) of rejection.

Application/Control Number: 09/676,365

Art Unit: 2165

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Neveen Abel-Jalil whose telephone number is 571-272-4074. The examiner can normally be reached on 8:30AM-5: 30PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Dov Popovici can be reached on 571-272-4038. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
